Phurushotham **Shekar**

Software Engineer | Vancouver, BC

phurushotham@gmail.com | PhuruShekar | phurushotham-shekar

Summary

Front-end focused software engineer with 5 years at AWS, working mainly in React and TypeScript. Experienced in building performant features for customers with 1M+ items, from design review all the way through production.

Experience

Amazon Web Services - IoT Console *Seattle, WA / Vancouver, BC*

Software Development Engineer *Oct 2021 - Present*

Performance & Scale

- Cut max bundle size from 550kB to 300kB and Largest Contentful Paint from 2.4s to 1.6s by profiling Webpack output and removing duplicate asset downloads.
- Prevented a page-load regression on a new feature for customers with 1M+ items by researching and adopting an internal GraphQL tool, cutting an N+1 API pattern down to a single client-server call.
- Modernized a 2019-era React console with no backend changes, rewriting 4 pages and upgrading old dependencies.

Leadership & Tooling

- Led the team's first accessibility initiative, resolving 350+ violations by delegating fixes, adding automated tests to catch regressions early, and documenting solutions for future consoles.
- Led a migration of 150+ feature flags used by 30+ engineers and wrote bulk-operation scripts that were later adopted into the team's internal tooling package.
- Onboarded new engineers and reviewed frontend code and UX design documentation for the team.

Product & Operations

- Shipped two features across two consoles for a global launch, including investigating and implementing ways to stay within TPS limits. Extended CRUD coverage to the second console after spotting gaps outside the original scope.
- Increased actionable UX feedback 4x by embedding and documenting feedback forms that automatically capture error state, page context, and session metadata.
- Cut false CloudWatch alarms from 4-10 per week to 0 by root-causing canary flakiness; maintained SLA on 24/7 on-call and reached full CD across pipelines through better test coverage.
- Prototyped a human-in-the-loop AI agent workflow for engineering tasks (map repo, find issues, propose and implement fixes), with editable checkpoints at each stage.

Rutgers University: Division of Student Affairs and Marketing *New Brunswick, NJ*

Web Developer Intern *May 2019 - May 2020*

- Cut page load times by 60%+ across 25+ Student Affairs sites by migrating from WordPress to Drupal, reducing external widget dependencies, and rebuilding with Bootstrap, SCSS, and JavaScript.
- Enabled 50+ non-technical staff to manage their own site content by writing end-to-end Drupal documentation.

Education

Rutgers University *New Brunswick, NJ*

B.S. in Electrical and Computer Engineering, Minor in Computer Science *Aug 2020*

Skills

Frontend	React, TypeScript, GraphQL, Webpack, Jest, React Testing Library, HTML/CSS
Backend & Cloud	Node.js, REST, AWS (Lambda, API Gateway, S3, CloudWatch), CI/CD
Languages	JavaScript, Python, Java, C
Tooling	Git, Figma, LLM-assisted dev tooling (Claude Code)
